1. Batch Overview Statistics

Metric	Value
Total Records Submitted	6
Valid Records Evaluated	6
Failed / Skipped Records	0
Pass Verdicts	2 (33%)
Needs Improvement Verdicts	1 (17%)
Fail Verdicts	3 (50%)
Hallucination Rate	50.0% of evaluated records
Average Weighted Overall Score	62.5/100

2. Per-Dimension Score Breakdown

The following table presents the average score across each evaluation dimension, computed from all successfully evaluated records in this batch.

Dimension	Average Score	Weight	Notes
Relevance	75.2/100	25%	Measures how directly the response addresses the question
Accuracy	39.2/100	35%	Factual correctness against reference evidence
Hallucination Risk	29.2%	25%	Percentage of responses containing unsupported claims
Completeness	72.2/100	15%	Coverage of all sub-aspects in the question
Weighted Overall	62.5/100	100%	Weighted combination of all four dimensions

3. Hallucination Detection Summary

3 of 6 evaluated responses (50.0%) contain one or more unsupported, contradictory, or fabricated claims as detected by the Hallucination Judge Agent.

Row	Query (truncated)	Hall. Score	Verdict	Flagged Claims Count
2	What are the core treatments and contraindications for acute	25%	Fail	1

3	What is the boiling point of water at sea level and how does	50%	Fail	1
6	Can antibiotics cure viral infections such as influenza or t...	100%	Fail	1

4. Completeness Assessment Summary

2 of 6 responses scored below 70 on Completeness, indicating that significant aspects of the question were not adequately addressed.

Row	Query (truncated)	Comp. Score	Missing Aspects
2	What are the core treatments and contraindications	50/100	What are the core treatments
7	Who discovered penicillin, in what year, and what	33/100	in what year; what type of organism produces it

5. Individual Response Evaluation Results

Detailed evaluation results for each record in the batch, including dimension scores, verdict reasoning, hallucinated claim details, and missing aspect analysis.

Record #2 — Row ID: 4f3d406a		Fail	Overall: 53/100
Relevance: 64/100	Accuracy: 25/100	Hallucination: 25%	Completeness: 50/100

Question:

What are the core treatments and contraindications for acute viral hepatitis A?

AI Response (excerpt):

Hepatitis A is an acute, self-limiting liver infection caused by HAV. Treatment is primarily supportive, including rest, balanced hydration, and adequate nutrition. Hospitalization is indicated only for fulminant liver failure or severe dehydration. Hepatotoxic drugs such as acetaminophen excess sho...

Evaluation Reasoning:

Overall evaluation verdict is 'Fail' with a weighted reliability score of 53/100. Dimension Scores — Relevance: 64/100 (Partially Relevant), Accuracy: 25/100 (Incorrect), Hallucination Risk: 25% (Severe Hallucination), Completeness: 50/100 (Partially Complete). Major issues identified: CRITICAL: Severe hallucination or unsupported claims detected.; CRITICAL: 1 claim(s) directly contradict trusted ...

Hallucinated / Unsupported Claims:

- [CONTRADICTION] Antibiotics and antiviral agents have no therapeutic efficacy against HAV infection.

Missing / Incomplete Aspects:

- What are the core treatments

Record #3 — Row ID: 764680f1		Fail	Overall: 46/100
Relevance: 82/100	Accuracy: 0/100	Hallucination: 50%	Completeness: 75/100

Question:

What is the boiling point of water at sea level and how does altitude affect it?

AI Response (excerpt):

Pure water boils at 100 degrees Celsius (212 degrees Fahrenheit) at standard sea level atmospheric pressure of 1 atm. As altitude increases, atmospheric pressure decreases, causing the boiling point of water to drop below 100 degrees Celsius.

Evaluation Reasoning:

Overall evaluation verdict is 'Fail' with a weighted reliability score of 46/100. Dimension Scores — Relevance: 82/100 (Fully Relevant), Accuracy: 0/100 (Contradictory), Hallucination Risk: 50% (Severe Hallucination), Completeness: 75/100 (Substantially Complete). Major issues identified: CRITICAL: Severe hallucination or unsupported claims detected.; CRITICAL: 1 claim(s) directly contradict trust...

Hallucinated / Unsupported Claims:

- [CONTRADICTION] Pure water boils at 100 degrees Celsius (212 degrees Fahrenheit) at standard sea level atmospheric pressure of 1 atm.

Record #4 — Row ID: 6a857b6a		Pass	Overall: 93/100
Relevance: 88/100	Accuracy: 100/100	Hallucination: 0%	Completeness: 75/100

Question:

Who invented the World Wide Web, when, and where was it invented?

AI Response (excerpt):

Tim Berners-Lee invented the World Wide Web in 1989 while working at CERN in Geneva, Switzerland.

Evaluation Reasoning:

Overall evaluation verdict is 'Pass' with a weighted reliability score of 93/100. Dimension Scores — Relevance: 88/100 (Fully Relevant), Accuracy: 100/100 (Correct), Hallucination Risk: 0% (No Hallucination), Completeness: 75/100 (Substantially Complete). Response demonstrates strong factual grounding, high relevance, and comprehensive question coverage.

Record #5 — Row ID: 7282517c		Pass	Overall: 85/100
Relevance: 64/100	Accuracy: 75/100	Hallucination: 0%	Completeness: 100/100

Question:

Explain the cause of World War I, key battles, and the Treaty of Versailles outcome.

AI Response (excerpt):

World War I was triggered by the assassination of Archduke Franz Ferdinand in Sarajevo in June 1914. Major battles included the Battle of the Somme, Verdun, and Marne. The war concluded with the Treaty of Versailles in 1919, which imposed heavy reparations and territorial losses on Germany.

Evaluation Reasoning:

Overall evaluation verdict is 'Pass' with a weighted reliability score of 85/100. Dimension Scores — Relevance: 64/100 (Partially Relevant), Accuracy: 75/100 (Partially Correct), Hallucination Risk: 0% (No Hallucination), Completeness: 100/100 (Fully Complete). Response demonstrates strong factual grounding, high relevance, and comprehensive question coverage.

Record #6 — Row ID: af5b4d8b		Fail	Overall: 38/100
Relevance: 91/100	Accuracy: 0/100	Hallucination: 100%	Completeness: 100/100

Question:

Can antibiotics cure viral infections such as influenza or the common cold?

AI Response (excerpt):

No, antibiotics cannot cure viral infections like influenza or the common cold. Antibiotics specifically target bacterial structures such as cell walls and bacterial ribosomes, which viruses do not possess. Taking antibiotics for viral illnesses provides no clinical benefit and accelerates antibioti...

Evaluation Reasoning:

Overall evaluation verdict is 'Fail' with a weighted reliability score of 38/100. Dimension Scores — Relevance: 91/100 (Fully Relevant), Accuracy: 0/100 (Contradictory), Hallucination Risk: 100% (Severe Hallucination), Completeness: 100/100 (Fully Complete). Major issues identified: CRITICAL: Severe hallucination or unsupported claims detected.; CRITICAL: 1 claim(s) directly contradict trusted ref...

Hallucinated / Unsupported Claims:

- [CONTRADICTION] Antibiotics specifically target bacterial structures such as cell walls and bacterial ribosomes, which viruses do not possess.

5. Individual Response Evaluation Results (continued)

Record #7 — Row ID: 7cfadbeb		Needs Improvement	Overall: 60/100
Relevance: 62/100	Accuracy: 35/100	Hallucination: 0%	Completeness: 33/100

Question:

Who discovered penicillin, in what year, and what type of organism produces it?

AI Response (excerpt):

Sir Alexander Fleming discovered penicillin in 1928 at St. Mary's Hospital in London. Penicillin is naturally produced by the *Penicillium notatum* fungus (mold).

Evaluation Reasoning:

Overall evaluation verdict is 'Needs Improvement' with a weighted reliability score of 60/100. Dimension Scores — Relevance: 62/100 (Partially Relevant), Accuracy: 35/100 (Incorrect), Hallucination Risk: 0% (No Hallucination), Completeness: 33/100 (Incomplete). Major issues identified: COMPLETENESS: 2 question requirement(s)/sub-question(s) omitted.; ACCURACY: High proportion of inaccurate or unverified information.

Missing / Incomplete Aspects:

- in what year
 - what type of organism produces it
-

6. Improvement Recommendations

The following recommendations are derived from recurring weaknesses identified across this batch evaluation. They are ranked by frequency of occurrence.

Recommendation 1:

[4 responses] Accuracy Improvement: Factual claims frequently diverge from reference content. AI systems should be fine-tuned or constrained to rely only on verified knowledge sources.

Recommendation 2:

[3 Fail verdicts] Critical Failures: A significant portion of responses failed evaluation. Consider re-evaluating the AI system's training data and performing targeted fine-tuning on the failing categories.

Recommendation 3:

[2 responses] Hallucination Reduction: Responses should be grounded in verifiable source material. Avoid speculative or fabricated claims. Consider implementing retrieval-augmented generation (RAG) to anchor responses.

Recommendation 4:

[2 responses] Completeness Enhancement: Responses omit key sub-questions or required aspects. Prompting strategies should be revised to ensure comprehensive coverage of multi-part questions.
