

Batch Evaluation Report

AI Response Validation System — v2.0
Generated: 29 September 2026 at 07:26 UTC
Batch ID: 2c901b90-ade7-486f-8cdc-f709cfb3096d | Timestamp:
2026-09-29T07:26:22.158557+00:00

1. Batch Overview Statistics

Metric	Value
Total Records Submitted	6
Valid Records Evaluated	6
Failed / Skipped Records	0
Pass Verdicts	0 (0%)
Needs Improvement Verdicts	2 (33%)
Fail Verdicts	4 (67%)
Hallucination Rate	66.7% of evaluated records
Average Weighted Overall Score	45.0/100

2. Per-Dimension Score Breakdown

The following table presents the average score across each evaluation dimension, computed from all successfully evaluated records in this batch.

Dimension	Average Score	Weight	Notes
Relevance	68.0/100	25%	Measures how directly the response addresses the question
Accuracy	25.0/100	35%	Factual correctness against reference evidence
Hallucination Risk	62.5%	25%	Percentage of responses containing unsupported claims
Completeness	63.8/100	15%	Coverage of all sub-aspects in the question
Weighted Overall	45.0/100	100%	Weighted combination of all four dimensions

3. Hallucination Detection Summary

4 of 6 evaluated responses (66.7%) contain one or more unsupported, contradictory, or fabricated claims as detected by the Hallucination Judge Agent.

Row	Query (truncated)	Hall. Score	Verdict	Flagged Claims Count
2	What are the core treatments and contraindications for acute	75%	Fail	2

3	What is the boiling point of water at sea level and how does it change with altitude?	100%	Fail	2
4	Who invented the World Wide Web, when, and where was it invented?	100%	Fail	1
6	Can antibiotics cure viral infections such as influenza or the common cold?	100%	Fail	1

4. Completeness Assessment Summary

3 of 6 responses scored below 70 on Completeness, indicating that significant aspects of the question were not adequately addressed.

Row	Query (truncated)	Comp. Score	Missing Aspects
2	What are the core treatments and contraindications for COVID-19?	50/100	What are the core treatments
5	Explain the cause of World War I, key battles, and the outcome.	50/100	key battles
7	Who discovered penicillin, in what year, and what was its significance?	33/100	in what year; what type of organism produces it

5. Individual Response Evaluation Results

Detailed evaluation results for each record in the batch, including dimension scores, verdict reasoning, hallucinated claim details, and missing aspect analysis.

Record #2 — Row ID: 1cb9ad08		Fail	Overall: 28/100
Relevance: 53/100	Accuracy: 0/100	Hallucination: 75%	Completeness: 50/100

Question:

What are the core treatments and contraindications for acute viral hepatitis A?

AI Response (excerpt):

Hepatitis A is treated immediately with high-dose intravenous amoxicillin to eradicate the viral strain within 48 hours. Patients must undergo routine interferon-alpha therapy to prevent chronic progression to liver cirrhosis. Drinking alcohol in moderation is permissible during recovery.

Evaluation Reasoning:

Overall evaluation verdict is 'Fail' with a weighted reliability score of 28/100. Dimension Scores — Relevance: 53/100 (Partially Relevant), Accuracy: 0/100 (Contradictory), Hallucination Risk: 75% (Severe Hallucination), Completeness: 50/100 (Partially Complete). Major issues identified: CRITICAL: Severe hallucination or unsupported claims detected.; CRITICAL: 1 claim(s) directly contradict trust...

Hallucinated / Unsupported Claims:

- [CONTRADICTION] Hepatitis A is treated immediately with high-dose intravenous amoxicillin to eradicate the viral strain within 48 hours.
- [UNSUPPORTED] Drinking alcohol in moderation is permissible during recovery.

Missing / Incomplete Aspects:

- What are the core treatments

Record #3 — Row ID: c40456a1		Fail	Overall: 32/100
Relevance: 84/100	Accuracy: 0/100	Hallucination: 100%	Completeness: 75/100

Question:

What is the boiling point of water at sea level and how does altitude affect it?

AI Response (excerpt):

Pure water boils at 75 degrees Celsius at standard sea level. As you climb higher in altitude, atmospheric pressure increases exponentially, causing the boiling point of water to rise above 150 degrees Celsius.

Evaluation Reasoning:

Overall evaluation verdict is 'Fail' with a weighted reliability score of 32/100. Dimension Scores — Relevance: 84/100 (Fully Relevant), Accuracy: 0/100 (Contradictory), Hallucination Risk: 100% (Severe Hallucination), Completeness: 75/100 (Substantially Complete). Major issues identified: CRITICAL: Severe hallucination or unsupported claims detected.; CRITICAL: 2 claim(s) directly contradict trust...

Hallucinated / Unsupported Claims:

- [CONTRADICTION] Pure water boils at 75 degrees Celsius at standard sea level.
- [CONTRADICTION] As you climb higher in altitude, atmospheric pressure increases exponentially, causing the boiling point of water to rise above 150 degrees Celsius.

Record #4 — Row ID: 1346683b		Fail	Overall: 32/100
Relevance: 87/100	Accuracy: 0/100	Hallucination: 100%	Completeness: 75/100

Question:

Who invented the World Wide Web, when, and where was it invented?

AI Response (excerpt):

Thomas Edison invented the World Wide Web in 1912 while working in his laboratory in Menlo Park, New Jersey.

Evaluation Reasoning:

Overall evaluation verdict is 'Fail' with a weighted reliability score of 32/100. Dimension Scores — Relevance: 87/100 (Fully Relevant), Accuracy: 0/100 (Contradictory), Hallucination Risk: 100% (Severe Hallucination), Completeness: 75/100 (Substantially Complete). Major issues identified: CRITICAL: Severe hallucination or unsupported claims detected.; CRITICAL: 1 claim(s) directly contradict trus...

Hallucinated / Unsupported Claims:

- [CONTRADICTION] Thomas Edison invented the World Wide Web in 1912 while working in his laboratory in Menlo Park, New Jersey.

Record #5 — Row ID: fe920043		Needs Improvement	Overall: 63/100
Relevance: 42/100	Accuracy: 50/100	Hallucination: 0%	Completeness: 50/100

Question:

Explain the cause of World War I, key battles, and the Treaty of Versailles outcome.

AI Response (excerpt):

World War I started in 1914.

Evaluation Reasoning:

Overall evaluation verdict is 'Needs Improvement' with a weighted reliability score of 63/100. Dimension Scores — Relevance: 42/100 (Unrelated), Accuracy: 50/100 (Partially Correct), Hallucination Risk: 0% (No Hallucination), Completeness: 50/100 (Partially Complete). Major issues identified: RELEVANCE: Response fails to address user prompt intent (42/100).; COMPLETENESS: 1 question requirement(s)...

Missing / Incomplete Aspects:

- key battles

Record #6 — Row ID: e8af18ca		Fail	Overall: 36/100
Relevance: 80/100	Accuracy: 0/100	Hallucination: 100%	Completeness: 100/100

Question:

Can antibiotics cure viral infections such as influenza or the common cold?

AI Response (excerpt):

Yes, broad-spectrum antibiotics such as azithromycin and amoxicillin are the standard first-line cure for influenza and common cold viruses, neutralizing viral replication within 12 hours.

Evaluation Reasoning:

Overall evaluation verdict is 'Fail' with a weighted reliability score of 36/100. Dimension Scores — Relevance: 80/100 (Fully Relevant), Accuracy: 0/100 (Contradictory), Hallucination Risk: 100% (Severe Hallucination), Completeness: 100/100 (Fully Complete). Major issues identified: CRITICAL: Severe hallucination or unsupported claims detected.; CRITICAL: 1 claim(s) directly contradict trusted ref...

Hallucinated / Unsupported Claims:

- [CONTRADICTION] Yes, broad-spectrum antibiotics such as azithromycin and amoxicillin are the standard first-line cure for influenza and common cold viruses, neutralizing viral replication within 12 hours.

5. Individual Response Evaluation Results (continued)

Record #7 — Row ID: 470eab47		Needs Improvement	Overall: 79/100
Relevance: 62/100	Accuracy: 100/100	Hallucination: 0%	Completeness: 33/100
Question: Who discovered penicillin, in what year, and what type of organism produces it?			
AI Response (excerpt): Alexander Fleming discovered penicillin in 1928, isolated from Penicillium mold.			
Evaluation Reasoning: Overall evaluation verdict is 'Needs Improvement' with a weighted reliability score of 79/100. Dimension Scores — Relevance: 62/100 (Partially Relevant), Accuracy: 100/100 (Correct), Hallucination Risk: 0% (No Hallucination), Completeness: 33/100 (Incomplete). Major issues identified: COMPLETENESS: 2 question requirement(s)/sub-question(s) omitted.			
Missing / Incomplete Aspects: ■ in what year ■ what type of organism produces it			

6. Improvement Recommendations

The following recommendations are derived from recurring weaknesses identified across this batch evaluation. They are ranked by frequency of occurrence.

Recommendation 1:

[5 responses] Accuracy Improvement: Factual claims frequently diverge from reference content. AI systems should be fine-tuned or constrained to rely only on verified knowledge sources.

Recommendation 2:

[4 responses] Hallucination Reduction: Responses should be grounded in verifiable source material. Avoid speculative or fabricated claims. Consider implementing retrieval-augmented generation (RAG) to anchor responses.

Recommendation 3:

[4 Fail verdicts] Critical Failures: A significant portion of responses failed evaluation. Consider re-evaluating the AI system's training data and performing targeted fine-tuning on the failing categories.

Recommendation 4:

[3 responses] Completeness Enhancement: Responses omit key sub-questions or required aspects. Prompting strategies should be revised to ensure comprehensive coverage of multi-part questions.

Recommendation 5:

[2 responses] Relevance Alignment: Responses frequently diverge from the question topic. Instruct the AI system to re-read the question intent before generating a response.
